Dan,
There were two units sold to the Army in Utah. One went to the production incinerator and one to the R&D incinerator. It is my understanding that the production group used it for several years, but since it wasn't required and perhaps told them things they didn't want to know, it wasn't written into the permit and they eventually stopped using it. I don't know what the R&D group is currently doing with their unit. If it is important, I could check with them and get back to you.
John

John- did you guys get any long term data from the Xact at the Army incinerators? Other than RATA testing?

Dan
